

KubePathAudit — Kill Chain Report

Cluster: prod-eks-cluster-01 | Generated: 2026-04-02 21:26:04 | Nodes: 24 | Edges: 28

1. Graph Summary

Metric	Value
Total Nodes	24
Total Edges	28
Crown Jewels	3
Critical Nodes	6
Scenario	Tesla Breach Simulation

2. Attack Path — Kill Chain

■ EASY attack path detected: internet → aws-cred-secret

Metric	Value
Source	internet
Target	aws-cred-secret
Total Hops	6
Path Risk Score	5.0
Difficulty	EASY

Detailed Kill Chain Steps:

Step	Node	Type	Action	CVEs
1	Internet	internet	Initiate external reconnaissance	—
2	Ingress Controller	ingress	Exploit ingress controller vulnerability	CVE-2024-7646
3	Tesla Dashboard	pod	Compromise pod via exposed service	CVE-2018-18264, CVE-2023-49797
4	dashboard-admin-sa	serviceaccount	Steal mounted ServiceAccount token	—
5	dashboard-cluster-admin	rolebinding	Leverage role binding escalation	—
6	cluster-admin	clusterrole	Exploit cluster-wide role privileges	—
7	aws-credentials	secret	Exfiltrate stored credentials	—

3. Blast Radius Analysis

Source: internet | Max Hops: 3 | Affected: 12 nodes | Risk: CRITICAL

■ Crown Jewels Reached: prod-database

4. Circular Permission Detection

■ 1 circular permission loop(s) detected! Risk: CRITICAL

- Circular path: Tesla Dashboard → Prometheus → Tesla Dashboard

5. Critical Node Analysis

Recommendation: Remove or restrict 'Ingress Controller' to break 7/10 attack paths (70.0% impact).

Rank	Node	Type	Paths Broken	Impact %
1	Ingress Controller	ingress	7	70.0%
2	Tesla Dashboard	pod	7	70.0%
3	API Server Pod	pod	6	60.0%
4	dashboard-admin-sa	serviceaccount	4	40.0%
5	dashboard-cluster-admin	rolebinding	4	40.0%
